

FBCBot – Church Communication Chatbot

1. Introduction

FBCBot is a chatbot platform designed to improve communication and engagement within churches. It provides a centralized, accessible, and automated way for members to receive updates, interact with church leadership, and stay spiritually connected.

2. Problem Statement

- Missed information about events and services
- Poor engagement from members
- Difficulty managing prayer requests and announcements
- Information overload in messaging groups

3. Proposed Solution

FBCBot will serve as a centralized chatbot accessible via Telegram (and later WhatsApp), enabling members to easily access church information and interact with church services.

4. Core Features (MVP)

- Church Events & Schedule
- Prayer Requests
- Announcements Broadcast
- Daily Devotional / Bible Verse
- Church Information Hub

5. Sermon Engagement & Feedback System

- Share sermon summaries and audio recordings
- Users can take quizzes to test understanding
- Admins can view participation and average scores
- Helps improve teaching effectiveness

6. Technology Stack

- Telegram Bot (initial), WhatsApp (future)
- Backend: Python (Reflex)
- Database: PostgreSQL / SQLite
- Cloud hosting

7. Implementation Plan

- Phase 1: MVP (2–4 weeks)
- Phase 2: Improvements and analytics
- Phase 3: Scale to multiple churches

8. Expected Impact

- Improved communication efficiency
- Increased member engagement
- Better teaching feedback loop

9. Conclusion

FBCBot aims to modernize church communication and provide a scalable solution for faith-based communities.
